

# CHEST DISEASES

## (PHASE 4)

### LEARNING AIM(S)

1	In this course, it is aimed that the students understand the importance of chest diseases, adopt the approach to respiratory diseases and gain the skills to distinguish pathological conditions with medical history and physical examination.
2	In this course, it is aimed that the students be able to diagnose and treat common respiratory system diseases or have the competence to make the appropriate approach.
3	In this course, it is aimed that the students know the precautions to be taken for the prevention of respiratory diseases and that they can make the necessary intervention in an emergency.
4	In this course, it is aimed that students develop patient-physician relations.

### LEARNING OBJECTIVE(S)

1	To be able to distinguish and question the symptoms of the respiratory system, to be able to take the medical history accurately and systematically.
2	To be able to perform physical examination for the respiratory system and to be able to distinguish pathological findings.
3	To be able to perform, read and interpret the PPD test.
4	To be able to explain the diagnostic tests and interventional procedures used in chest diseases.
5	To be able to recognize certain pathologies in the chest X-ray.
6	To be able to evaluate the pulmonary function test.
7	To be able to write prescriptions.

### INTENDED LEARNING OUTCOME(S)

1	Can distinguish and question the symptoms of the respiratory system, can take the medical history accurately and systematically.
---	--

2	Can perform physical examination for the respiratory system and can distinguish pathological findings.
3	Can perform, read, and interpret the PPD test.
4	Can explain the diagnostic tests and interventional procedures used in chest diseases.
5	Can recognize certain pathologies in the chest X-ray.
6	Can evaluate the pulmonary function test.
7	Can write prescriptions.
